* Lyme disease case definition was changed for 2008 and the category of probable was reported for the first time. (US 2008 confirmed = 28,921 / probable = 6,277) The numbers used in 2008 include confirmed and probable cases reported by CDC.

Note: According to the CDC only 10% of Lyme disease cases that meet the case definition are reported, meaning if 10,000 cases are reported, 100,000 cases occurred. This data does not include all the cases that fall outside the stringent surveillance case definition.

▲ Reporting criteria changed:
CA (2005): Laboratory reporting of Lyme disease is now mandatory.
CT (2003): Lyme disease is deleted from the list of Laboratory Reportable Significant Findings. Source: Connecticut Epidemiologist Newsletter, Vol. 23, No. 1.
(Note: In 2007, CT instituted electronic lab reporting, however, not all labs are able to report electronically.)
HI (2006): CDC notes Lyme is not a notifiable disease in Hawaii. Source: MMWR
RI (2004): RI Dept. of Health will no longer prompt health care providers to report cases in response to positive lab reports. Source: RI DOH Office of Communicable Diseases, Health Advisory 7/20/05

* Lyme disease case definition was changed for 2008 and the category of probable was reported for the first time. (US 2008 confirmed = 28,921 / probable = 6,277) The numbers used in 2008 include confirmed and probable cases reported by CDC.

Note: According to the CDC only 10% of Lyme disease cases that meet the case definition are reported, meaning if 10,000 cases are reported, 100,000 cases occurred. This data does not include all the cases that fall outside the stringent surveillance case definition.

▲ Reporting criteria changed:
CA (2005): Laboratory reporting of Lyme disease is now mandatory.
CT (2003): Lyme disease is deleted from the list of Laboratory Reportable Significant Findings. Source: Connecticut Epidemiologist Newsletter, Vol. 23, No. 1.
(Note: In 2007, CT instituted electronic lab reporting, however, not all labs are able to report electronically.)
HI (2006): CDC notes Lyme is not a notifiable disease in Hawaii. Source: MMWR
RI (2004): RI Dept. of Health will no longer prompt health care providers to report cases in response to positive lab reports. Source: RI DOH Office of Communicable Diseases, Health Advisory 7/20/05
